# Professional software

With hundreds of standard symbols, an intuitive interface and suitable functionalities, SEE Electrical LT is THE software dedicated to electrical schematics.

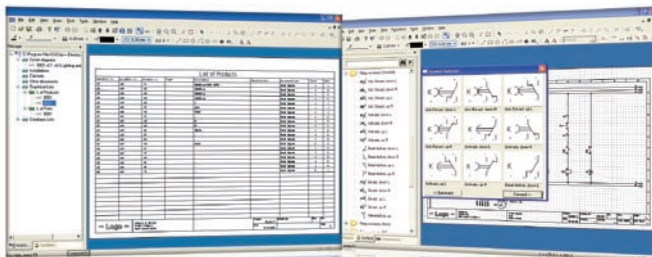

## 'Smart' functionalities

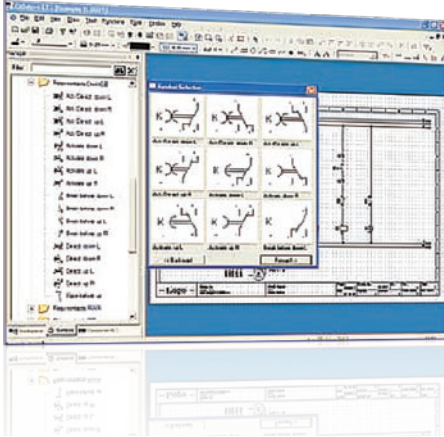

Thanks to its powerful and specialized drawing functions, SEE Electrical LT enables you to work in an automated way:

- ✓ Connection points are created automatically.
- ✓ Symbols break the wire at insertion and wires are redrawn automatically when a symbol is moved or deleted.
- ✓ Symbols are automatically numbered.
- ✓ Symbol rotation, symmetry, alignment & hatching functions are available.
- ✓ Standard Product & Part lists are generated on real-time and can be cut and pasted into Excel®.
- ✓ All sorts of drawing objects: line, multiline, rectangle, circle, arc, ellipse, spline, arrows can be inserted.
- ✓ SEE ELECTRICAL LT allows you to work to scale.
- ✓ The dimensioning capabilities help create dimensions automatically and dynamically.
- ✓ Bitmaps and any type of OLE (Object Linking and Embedding) file can be inserted. This can be for instance Excel spreadsheets, Word documents,...

## Easy symbol creation

Do you do the same type of drawing quite often?

With SEE Electrical LT, you can create symbols very easily, without the use of complicated symbol editors. Simply design the shape, insert its name and description and input it directly in a symbol library. This also applies to symbol groups (as part of a diagram).

## Upgradeability

SEE Electrical LT can be upgraded to other IGE+XAO packages (such as SEE Electrical «Basic», «Standard» or «Advanced») which offer high-level CAD functionalities such as automatic generation of graphical terminal plans, PLC I/O manager, configuration of multicores...

The “Basic” level suits all kind of industries ‘needs and offers a huge number of functionalities at an attractive price. The “Standard” level offers numerous functions which allow creating and managing electrical schematics with maximum productivity. Then, the “Advanced” level includes more developed functionalities (management of automate input-output, map automated generation ...) which enable to manage complex projects.

An integrated DXF / DWG converter allows to import and export SEE Electrical LT drawings to other CAD software packages.

## Compatible with other CAD packages

An integrated DXF / DWG converter allows to import and export SEE Electrical LT drawings to other CAD software packages

## Ergonomics

All functions & command in SEE Electrical LT are designed specially for electrical engineering and its intuitive interface makes you be productive immediately, without training.

With SEE Electrical LT, you can open as many screens as you want and you are able to work across several projects at once.

- ✓ Drag and drop functionality
- ✓ Native ActiveX included
- ✓ Project Management tools
